SUMMARY

Junior full stack developer and BSIT graduate (June 2026). I build web apps end to end with Next.js, React, Node.js, FastAPI and PostgreSQL, and I pick projects that are harder than what I already know. I write tests, set up CI and enforce access rules in the database.

EDUCATION

BS Information Technology | University of Cebu, Cebu City — Graduated June 2026

EXPERIENCE

Freelance Full Stack Developer | DapperTails — Jul 2026 – Aug 2026

Mobile pet grooming business, New Jersey, USA (remote)

- Built a call-assistant web app (React, Node.js) that staff use for notes and lookups during customer phone calls.
- Added breed autocomplete to stop spelling errors, and matched each breed to its coat type and price automatically, replacing manual lookups.
- Stored client profiles, call history and pet notes in a database; I still send the client price and data updates.

Full Stack Intern (OJT, 1,000 hours) | MMB Network and Data Solutions — Aug 2025 – Jan 2026

System integrator and IT solutions provider, Cebu City

- Proposed and built an internal sales tracker and CRM dashboard with React, Node.js and Firebase.
- Built secure login, sales records, a last-contact log per client and monthly charts showing whether sales are rising or falling. Deployed on Vercel for logged-in staff only, to keep private sales data protected.

PERSONAL PROJECTS

Marketplace | Next.js, TypeScript, FastAPI, Python, PostgreSQL, Supabase, Docker — Oct 2026

marketplace-rust-six.vercel.app | github.com/ArvinceRamos/marketplace

- Built a buy-and-sell site for the Philippines with listings, photos, search, chat, offers and a test-mode checkout (no real money moves).
- Designed 23 PostgreSQL tables with row-level security; API requests run under the caller's role, so access rules hold even if the API has a bug.
- Built an append-only ledger with a deferred trigger that rejects any transaction that doesn't balance to zero; amounts stored in whole centavos.
- Signed webhooks with HMAC, a 5-minute replay window and duplicate-event checks. Wrote about 300 tests (212 pytest, 97 frontend).

RvFit | Next.js, React, TypeScript, Supabase, Vitest, GitHub Actions — Oct 2026

rv-fit.vercel.app | github.com/ArvinceRamos/RvFit

- Built a beginner fitness app that estimates calorie and macro targets, plans meals from a USDA-based food catalog, and logs workouts and weigh-ins.
- Designed a 12-table PostgreSQL schema with row-level security and transactional SQL functions, so users can only access their own data.
- Built a check-in that compares weight trend with the user's target and never suggests going below a safe calorie floor. Wrote 667 unit tests and a CI pipeline (typecheck, lint, test, build) that runs on every push.

TravelMate AI | Capstone, PM and sole developer | React, Node.js, Express, Firebase, Gemini — Feb 2026 – May 2026

travelmate-ai-psi.vercel.app | github.com/ArvinceRamos/travelmate-ai

- Led the capstone and built an AI travel planner: chat or talk to get a day-by-day itinerary, then see stops on a map with routes, weather and reminders.
- Built one interface for Gemini, OpenAI, Groq and Ollama with a fallback model, retries and structured JSON output.
- Moved maps, routing and weather to free services (OpenStreetMap, OSRM, Open-Meteo) with caching and a rate-limited queue, so it runs at no cost.

SKILLS

Programming	TypeScript, JavaScript, Python, SQL, HTML, CSS
Frameworks	React, Next.js, Vite, Tailwind CSS, Node.js, Express, FastAPI, REST APIs
Data and auth	PostgreSQL, Supabase (row-level security), Firebase Auth, Firestore
Testing and tools	Vitest, pytest, GitHub Actions, Docker, Git
AI	Gemini, OpenAI, Groq, Ollama APIs; Claude Code for day-to-day development
Spoken languages	English, Filipino, Cebuano
